## **Curtis 1510(A)**

This sheet is provided to aid in the installation of your remanufactured CURTIS controller. Upon installation, you may encounter problems that may, or may not, be due to a faulty controller. The following steps must be taken to help diagnose a possible cart fault or faulty controller. An analog or digital volt ohm meter (VOM) will be needed to perform these checks.

WARRANTY WILL BE VOID

If These Steps are Not Performed Before Installing The Control

☐ Repair or replace pins as necessary.

STEPS TO PERFORM BEFORE CONTROL INSTALLATION.

<	

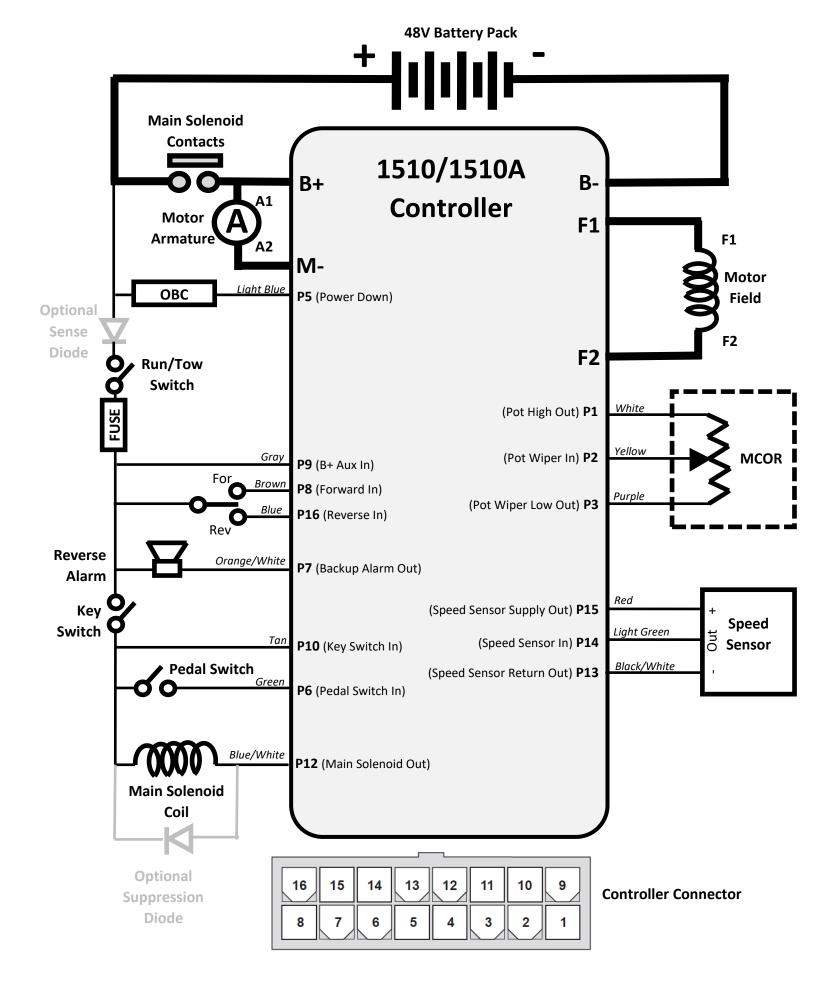

CHECK MOTOR WINDINGS:
$\square$ Set your VOM to RESISTANCE ( $\Omega$ ).
$\square$ With your motor disconnected, measure A1 to A2. This must measure BETWEEN .3 $\Omega$ and 1 $\Omega$ .
$\square$ With your motor disconnected, measure F1 to F2. This must measure BETWEEN 1 $\Omega$ and 2 $\Omega$ .
$\square$ With your motor disconnected, measure A1 to F1. This <u>must</u> measure OPEN.
$\square$ With your motor disconnected, measure F1 to motor case. This <u>must</u> measure greater than 5M $\Omega$ .
CHECK MAIN SOLENOID:
$\square$ Disconnect all wires from the main solenoid.
$\square$ Set your VOM to RESISTANCE ( $\Omega$ ).
$\square$ Measure the solenoid coil. This <u>must</u> measure NO LESS than 100 $\Omega$ .
$\square$ Connect VOM leads to the main solenoid lugs.
$\square$ Attach jumpers from main battery positive and negative to the coil (small terminals).
$\square$ Meter must jump from infinity to LESS THAN .3 $\Omega$ .
$\square$ Remove jumpers and reconnect solenoid wiring from the harness. (If suppression diode is present,
The non-banded side must go to the blue/white wire – pin 12 from controller.)
CHECK THE CART WIRE HARNESS:

IF ANY OF THE ABOVE ITEMS ARE NOT WITHIN THE SPECIFICED RANGES THE CONTROLLER WILL FAIL.

 $\square$  Check the connectors on the wire harness for corrosion, loose, broken, burnt or missing pins.

It is recommended to replace your solenoid at the time of controller replacement. FSIP now stocks popular replacement White Rodgers solenoids for your convenience.

THESE ITEMS MUST BE CORRECTED BEFORE THE CONTROLLER IS INSTALLED OR WARRANTY WILL BE VOID.

77-Club Car Precedent IQ (1510\_A) Install Sheet-370 Rev 03 12/19/2023

## Club Car Precedent (IQ) Troubleshooting Sequence

## FOR SAFETY, ALWAYS LIFT THE DRIVE WHEELS OFF THE GROUND WHEN TROUBLESHOOTING!

ALL TESTS ARE CONDUCTED WITH RUN-TOW/MAINTENANCE SWITCH IN THE RUN POSITION AND WITH A GOOD BATTERY PACK VOLTAGE MEASUREMENT. ALSO, THE CONNECTOR MUST BE ATTACHED TO THE CONTROLLER WHEN MAKING THESE CHECKS. YOU WILL NEED TO 'BACK PROBE' THE PINS FROM THE WIRE SIDE OF THE CONNECTOR. USE A PAPERCLIP IF NECESSARY.

Attach voltmeter negative (-) lead to main battery – for the following tests

☐ Measure the voltage at the main battery positive post (let's call it Pack Voltage)

Use the following sequence when checking individual pins (don't skip steps). If you find a fault, do not move on to the next step until the fault is corrected:

☐ Pin 5	with charger disconnected, must be greater than 30V (if less than 30V this control will be dead)
	- If not, your OBC may be in sleep mode. Put your cart on charge for 1 minute, disconnect then
	recheck. If you still do not have more than 30V at this pin, you may have an OBC issue
□ Pin 9	Must be equal to Pack Voltage
	- If not Pack Voltage, check wiring, Sense Diode (if present), Run-Tow/Maintenance Switch or Fus
□ Pin 8	With F/R Switch in Reverse, must equal 0 volts
	<ul> <li>If not 0 volts, check wiring and F/R Switch for a shorted condition</li> </ul>
□ Pin 8	With F/R Switch in Forward, must equal Pack Voltage
	- If not Pack Voltage, check wiring and F/R Switch for an open condition
☐ Pin 16	With F/R Switch in Forward, must equal 0 volts
	<ul> <li>If not 0 volts, check wiring and F/R Switch for a shorted condition</li> </ul>
☐ Pin 16	With F/R Switch in Reverse must equal Pack Voltage
	- If not Pack Voltage, check wiring and F/R Switch for an open condition
☐ Pin 7	When in Neutral, Must equal Pack Voltage
	- If not Pack Voltage, check wiring and Reverse Alarm for an open condition
☐ Pin 10	With Key Off, must equal 0 volts
_	<ul> <li>If not 0 volts, check Key Switch for short condition</li> </ul>
☐ Pin 10	With Key On, must equal Pack Voltage
_	- If not Pack Voltage, check Key Switch for open condition
☐ Pin 6	With Pedal Up, must equal 0 volts
_	<ul> <li>If not 0 volts, check wiring and Pedal Switch for a shorted condition</li> </ul>
☐ Pin 6	With Pedal Down, must equal Pack Voltage
_	<ul> <li>If not Pack Voltage, check wiring and Pedal Switch for an open condition</li> </ul>
☐ Pin 12	Must equal Pack Voltage
_	<ul> <li>If not Pack Voltage, check wiring and Main Solenoid Coil for an open condition</li> </ul>
☐ Pin 1	Must equal 5 volts
	- If not 5 volts, check wiring and check with MCOR removed – if voltage goes to 5 volts, replace
_	MCOR
∐ Pin 2	With Pedal Up, must equal 0 volts
	- If not 0 volts, check wiring and MCOR

Continued on next page ...

☐ Pin 2	With Pedal Down, must equal 5 volts
	- If not 5 volts, check wiring and MCOR
□ Pin 3	Must equal 0 volts
	<ul> <li>If not 0 volts, harness and/or harness connector is defective, check wiring</li> </ul>
□ Pin 15	Must equal 15 volts
	<ul> <li>If not 15 volts, check wiring and check with Speed Sensor removed – if voltage goes to 15 volts, replace Speed Sensor</li> </ul>
$\square$ Pin 14	While slowly turning the drive wheel, must toggle between 0 volts and 5 volts
	- If not toggling, check wiring and if necessary replace Speed Sensor
Helpfu	l Hints
☐ If the c	art is in limp mode (traveling less than 8MPH), and a Sense Diode is present in your vehicle, check the
senses	for continuity. If the diode has continuity in both directions, it is defective. In this case, the controller a Main Welded condition and places the cart in limp mode. Replace the Sense Diode with Club Car umber 102576801. This diode, if present, will be located near the Run/Tow Switch.
MANY	OT UNDER ESTIMATE THE IMPORTANCE OF MOTOR RESISTANCE CHECKS AND MAIN SOLENOID CHECKS.  CART ISSUES ARE CAUSED BY BURNT/DAMAGED BRUSHES THAT WILL BE FOUND AS PART OF THE
AKIVIA	TURE RESISTANCE CHECK. ALSO A SHORTED ARMATURE AND FIELD WITHIN THE MOTOR <u>WILL</u> DAMAGE

THIS CONTROLLER.
