## On Board charger

### TECHNICAL MANUAL

Version : 00

Release date: 23/08/2023

“Before installing and using the product, please read the manual”

## Contents

1.	Charger instructions .....	1
1.1	Operation safety instructions.....	1
1.2	Operating environment condition.....	3
1.3	Charger feature .....	4
2.	Product introduction .....	5
2.1	General overview.....	5
2.2	Installation dimension and mounting hole locations .....	5
2.3	Interface definition.....	6
3.	Operating Instructions.....	7
3.1	LED marking and identification .....	7
3.2	Error Code .....	8
3.3	Charging profile.....	9
3.3.1	Battery type: IU1a WET 12h.....	9
3.3.2	Battery type: IU1a WET 8h.....	10
3.3.3	Battery type: IUIU0 AGM Discover .....	11
3.3.4	Battery type: IU0U AGM Generic.....	12
3.3.5	Battery type: IUU0 AGM FULLRIVER .....	13
3.3.6	Battery type: IU1a GEL.....	14
3.3.7	Battery type: IU0U Zenith .....	15
3.3.8	Battery type: Lithium Relion .....	16
3.3.9	Battery type: IU1a AGM Trojan.....	17
3.3.10	Battery type: Trojan Trillium .....	18
3.3.11	Battery type: AGM Hoppecke .....	19
3.4	Online program update .....	20

## 1. Charger instructions

This manual will introduce the composition, installation, wiring, operation and setting, error display and other contents of AP-P720 series smart on board charger in detail,,

When AP-P720 series smart on board chargers are applied to lead-acid / Lithium batteries, the corresponding charge profile can be selected through Bluetooth to achieve a good charging effect, When applied to lithium batteries, the charging characteristics can be controlled through CAN BUS and BMS communication of the battery

### 1.1 Operation safety instructions

Before starting the operation, please read the operation instructions and precautions carefully to reduce the occurrence of accidents, The "CAUTION, CAUTION, WARNING, DANGER" items in the product and product manual do not

represent all the safety precautions to be followed, but only serve as a supplement to various operational safety precautions, Therefore, the personnel responsible for the installation and operation of this product must be trained and master the correct operation methods and various safety precautions before operating the equipment,

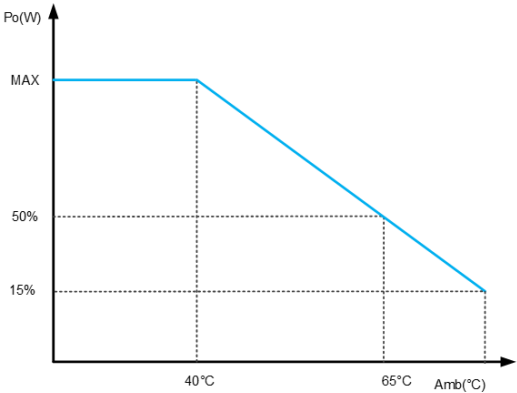

When carrying out various operations of this product, the user must abide by the safety regulations of the relevant industry, and strictly abide by the relevant equipment precautions and special safety instructions provided by the company, The company will not be responsible for any safety problems beyond the original design and manufacture due to violation, If there are other local safety regulations, please follow them together, See Table 1-1 for common usage precautions,

Table 1-1 Safety precautions for operation

 <b>Warning</b>	Ensure that the charger is well grounded before operating the charger to avoid electric shock and endanger personal safety
 <b>Warning</b>	Before connecting the cables, please confirm the polarity and wiring is correct
 <b>Warning</b>	Do not touch uninsulated connectors or terminals
 <b>Warning</b>	Be sure to use special tools when working with dangerous voltages and AC voltage
 <b>Warning</b>	Do not move the charger while it is operating
 <b>Warning</b>	The operator cannot disassemble the faulty internal components of the unit by himself, and must be maintained by professionals
 <b>Danger</b> <small>⚠️</small>	When the charger is running, there are parts with voltage, Improper direct contact or indirect contact through wet objects will bring the danger of electric shock
 <b>Warning</b>	Do not operate the charger if it has been violently bumped, dropped or damaged in any way

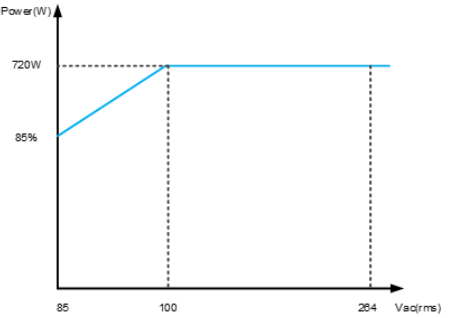

## 1.2 Operating environment condition

- ◆ The altitude does not exceed 3000 meters
- ◆ Ambient temperature not higher than +65°C and not lower than -20°C (if  $AMB > 40^{\circ}C$ , the charger start reduce output power)
- ◆ Ambient humidity: 0% ~ 95% RH without condensation
- ◆ Non-explosive hazard environment
- ◆ No oil stains, water stains and places that are prone to condensation
- ◆ Do not charge frozen or non-rechargeable batteries
- ◆ Keep the environment ventilated (when charging lead-acid batteries)

Item	Specifications	Remark
Operating temperature	 <p>The graph plots output power <math>P_o</math> (W) on the y-axis against ambient temperature <math>Amb</math> (<math>^{\circ}C</math>) on the x-axis. The y-axis has markers for MAX, 50%, and 15%. The x-axis has markers for 40°C and 65°C. A blue line shows that <math>P_o</math> is constant at MAX for <math>Amb \leq 40^{\circ}C</math>. For <math>Amb &gt; 40^{\circ}C</math>, <math>P_o</math> decreases linearly, reaching 15% at <math>Amb = 65^{\circ}C</math>. Dashed lines indicate the 50% power level at 65°C and the 15% power level at 65°C.</p>	<p>1. Test at <math>V_{in}=100Vac</math> / 24V or 48V output (depending on the model)</p>

### 1.3 Charger feature

- ◆ Allows wide range of input voltage variation (100Vac~240Vac, if  $V_{in} < 100Vac$ , charger reduce output power)
- ◆ Resonant soft switching technology to improve charge efficiency ;
- ◆ Adopt active power factor correction ;
- ◆ Support online program update
- ◆ Bluetooth APP can be used to set charging profile and charging current
- ◆ Lithium battery BMS can control charger voltage and current through CAN BUS

Item	Specifications	Remark
AC power de-rating	 <p>The graph illustrates the AC power de-rating characteristics. The vertical axis represents Power in Watts (W), with a specific point marked at 720W. The horizontal axis represents the input AC voltage in root-mean-square (rms) Volts (Vac), with marked values at 85, 100, and 204. A blue line shows that at 85 Vac, the power is 85% of the full power. As the voltage increases to 100 Vac, the power reaches the full 720W. From 100 Vac to 204 Vac, the power remains constant at 720W, indicating that the charger maintains full power output within this range.</p>	Test at Full Power output (24V or 48V) / AMB=25°C

## 2. Product introduction

### 2.1 General overview

### 2.2 Installation dimension and mounting hole locations

### 2.3 Interface definition

Part name	Male connector	Mating connector
AC input	IEC 60320 C16 inlet	IEC 60320 C15 certified AC power Cord Wire size: 18 AWG min
DC output	JONHON ICA-BY20F series 2pins	JONHON ICA-BY20T Wire size: 10 AWG min
Signal output	Amphenol X-Lok C Size series CD-10PMMS 10pins	Amphenol X-Lok C Size series CD10AFFM Wire size: 20 AWG

DC Output	
1	Battery+
2	Battery-

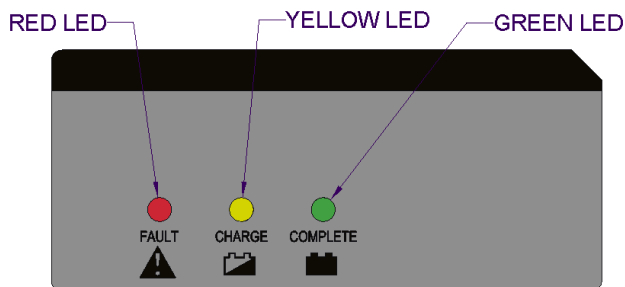

Signal Output	
1	LED 1A
3	LED 3A
5	LED 5A
7	Ground
2	Temp+
4	Temp-
6	CANH
8	CANL
9	Interlock+
10	Interlock-

AC Input IEC60320 C16	
1	Line
2	Natural
3	FG

### 3. Operating Instructions

#### 3.1 LED marking and identification

##### Normal state

No,	LED	status
1,	R/G/Y LEDs on	Standby
2,	Yellow LED Blinking	Battery charging
3	Green LED on	charge finished or Balance/Equilizing charge

##### Error state

No,	LED	Status
1	Red LED blinking 1 time and Pause 1 second	No Battery
2	Red LED blinking 2 time and Pause 1 second	Battery reverse
3	Red LED blinking 3 time and Pause 1 second	Output voltage error
4	Red LED blinking 4 time and Pause 1 second	Over current
5	Red LED blinking 5 time and Pause 1 second	Timeout error
6	Red LED blinking 6 time and Pause 1 second	LLC
7	Red LED blinking 7 time and Pause 1 second	OTP
8	Red LED blinking 8 time and Pause 1 second	Low input voltage
9	Red LED blinking 9 time and Pause 1 second	PFC voltage error

Example: Battery reverse

### 3.2 Error Code

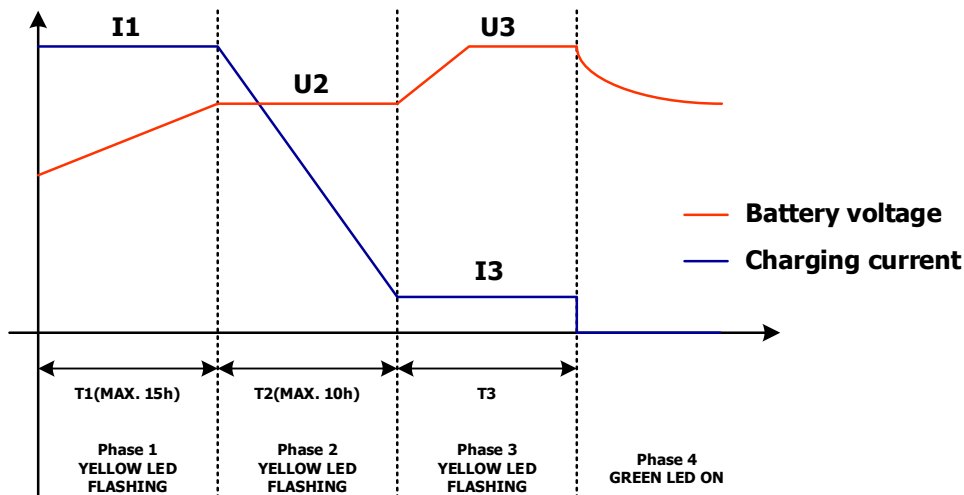

Index:0x32C1

Subindex:0x07

CAN Open code	Error Description
1	extra voltage
2	thermostate
3	timer overflow
4	timer overflow phase I
5	timer overflow phase U
6	dV/dt error
7	dI/dt error
8	<i>reserved</i>
9	Security timer overflow
10	mosfet open
11	open circuit
12	power module fault
13	thermal sensor fault(battery)
14	thermal sensor fault(control board)
15	<i>reserved</i>
16	RPDOs error

### 3.3 Charging profile

#### 3.3.1 Battery type: IU1a WET 12h

The charging current can switch between different current commands after selecting the battery type via Bluetooth

No	1	2	3	4
$I_1$ [A]	7,5	10	12,5	15
$I_3$ [A]	2,3	3,0	3,8	4,5

Charging voltage

model>	24V	48V
$U_2$ [V]	28,8	57,6
$U_3$ [V]	31,8	63,6

The charging time limit  $T_3$  changes with the  $T_1+T_2$

$T_1+T_2$ [h]	<1	2	3	>3
$T_3$ [h]	1	2	3	3

### 3.3.2 Battery type: IU1a WET 8h

The charging current can switch between different current commands after selecting the battery type via Bluetooth,

No	1	2	3	4
$I_1$ [A]	7,5	10	12,5	15
$I_3$ [A]	1,9	2,5	3,1	3,8

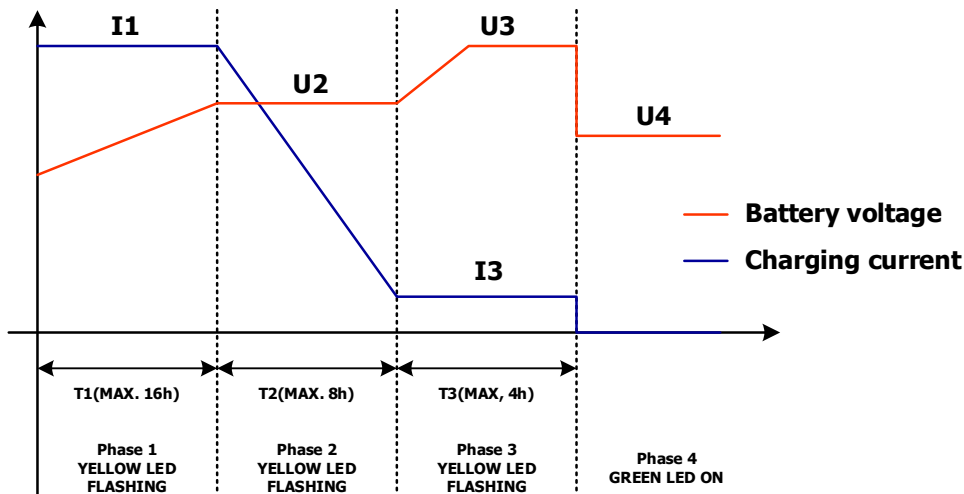

Charging voltage

	24V	48V
$U_2$ [V]	28,8	57,6
$U_3$ [V]	31,8	63,6

The charging time limit  $T_3$  changes with the  $T_1+T_2$ ,

$T_1+T_2$ [h]	<1	2	3	>3
$T_3$ [h]	1	2	3	3

### 3.3.3 Battery type: IUIU0 AGM Discover

The charging current can switch between different current commands after selecting the battery type via Bluetooth,

No	1	2	3	4
I1[A]	7,5	10	12,5	15
I3[A]	1,2	1,6	2,0	2,4

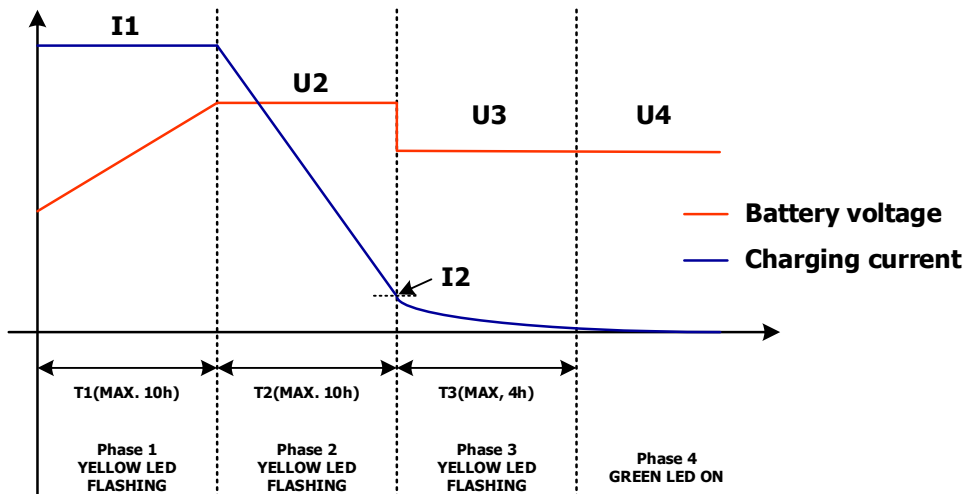

Charging voltage

	24V	48V
U2[V]	28,8	57,6
U3[V]	31,2	62,4
U4[V]	27,2	54,4

The charging time limit T3 changes with the T1+T2 ,

T1+T2[h]	<1	2	3	>4
T3[h]	1	2	3	4

### 3.3.4 Battery type: IU0U AGM Generic

The charging current can switch between different current commands after selecting the battery type via Bluetooth,

No	1	2	3	4
I1[A]	7,5	10	12,5	15
I3[A]	1,2	1,6	2,0	2,4

Charging voltage

Model>	24V	48V
U2[V]	29,4	58,8
U3[V]	27,6	55,2
U4[V]	27,6	55,2

Charging time limit,

T{1}	+T2[h]	T3[h]
10h	10h	4h

### 3.3.5 Battery type: IUU0 AGM FULLRIVER

The charging current can switch between different current commands after selecting the battery type via Bluetooth,

No	1	2	3	4
$I_1$ [A]	7,5	10	12,5	15
$I_3$ [A]	1,2	1,6	2,0	2,4

Charging voltage

Model>	24V	48V
$U_2$ [V]	29,8	59,6
$U_3$ [V]	27,6	55,2
$U_4$ [V]	27,6	55,2

Charging time limit

$T_1$ [h]	$+T_2$ [h]	$T_3$ [h]
10h	10h	4h

### 3.3.6 Battery type: IU1a GEL

The charging current can switch between different current commands after selecting the battery type via Bluetooth,

No	1	2	3	4
I1[A]	7,5	10	12,5	15
I3[A]	0,6	0,8	1,0	1,2

Charging voltage

Model>	24V	48V
U2[V]	28,2	56,4
U3[V]	32,4	64,8
U4[V]	27,6	55,2

The charging time limit T3 changes with the T1+T2 ,

T1+T2[h]	<1	2	3	4	>4
T3[h]	1	2	3	4	4

### 3.3.7 Battery type: IU0U Zenith

The charging current can switch between different current commands after selecting the battery type via Bluetooth,

No	1	2	3	4
$I_1$ [A]	7,5	10	12,5	15

Charging voltage

Model>	24V	48V
$U_2$ [V]	29,2	58,4
$U_3$ [V]	27	54

The charging time limit  $T_2$  changes with the  $T_1$ ,

$T_1$ [h]	$\leq 2$	3	4	5	$\geq 6$
$T_2$ [h]	2	3	4	5	6

### 3.3.8 Battery type: Lithium Relion

The charging current can switch between different current commands after selecting the battery type via Bluetooth,

No	1	2	3	4
I1[A]	7,5	10	12,5	15
I2[A]	0,5	0,75	0,75	1

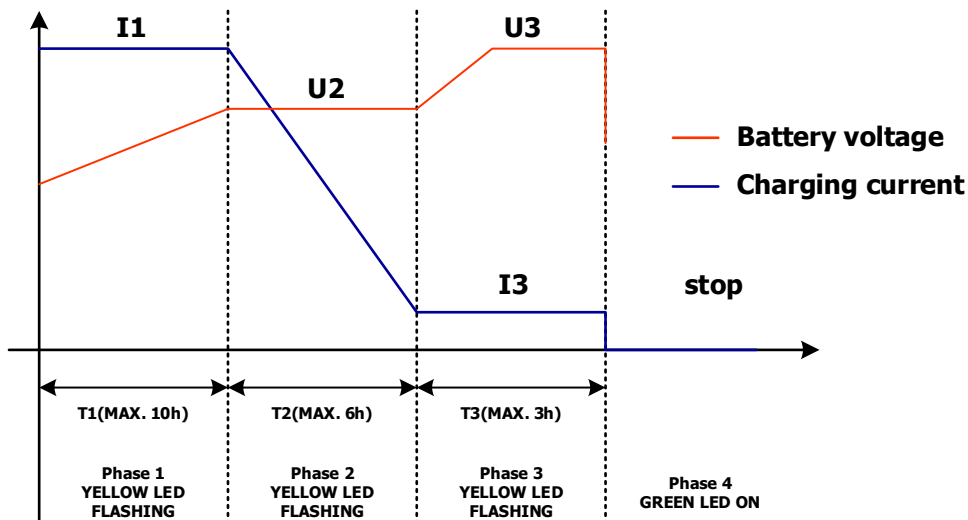

Charging voltage

Model>	24V	48V
U2[V]	28	56

Charging time limit

T1[h]	T2[h]
6	2

### 3.3.9 Battery type: IU1a AGM Trojan

The charging current can switch between different current commands after selecting the battery type via Bluetooth,

No	1	2	3	4
I1[A]	7,5	10	12,5	15
I3[A]	1,4	1,8	2,25	2,7

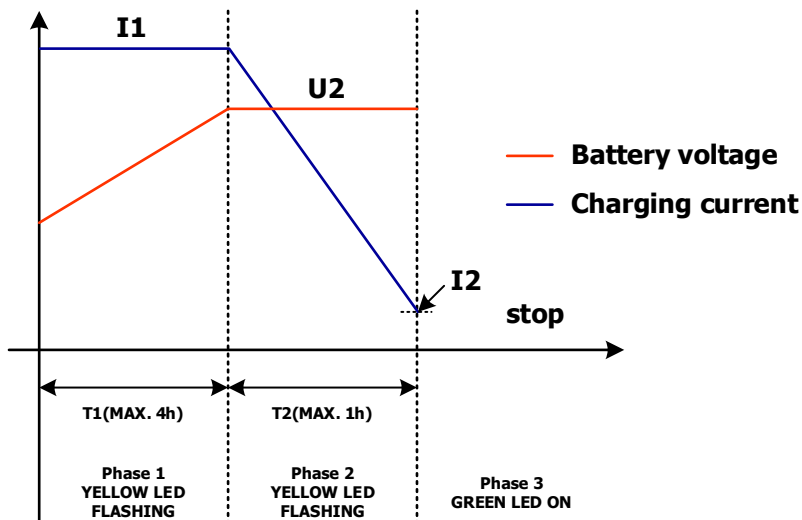

Charging voltage

Model>	24V	48V
U2[V]	28,7	57,4
U3[V]	32,4	64,8

Charging time limit

T[1]	T2[h]	T3[h]	T1+T2+T3[h]
10h	6h	3h	16h

### 3.3.10 Battery type: Trojan Trillium

The charging current can switch between different current commands after selecting the battery type via Bluetooth,

No	1	2	3	4
$I_1$ [A]	7,5	10	12,5	15
$I_2$ [A]	0,4	0,5	0,6	0,8

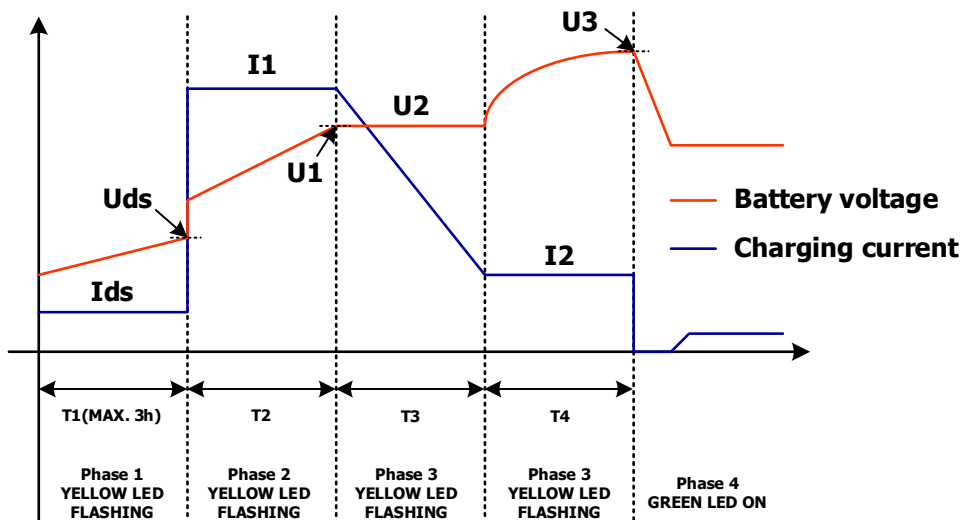

Charging voltage

Model>	24V	48V
$U_2$ [V]	29,2	58,4

Charging time limit

$T_1$ [h]	$T_2$ [h]
4	1

### 3.3.11 Battery type: AGM Hoppecke

The charging current can switch between different current commands after selecting the battery type via Bluetooth,

No	1	2	3	4
$I_{ds}[A]$	0,5	0,66	0,825	1,0
$I_1[A]$	7,5	10	12,5	15
$I_2[A]$	0,8	1,07	1,34	1,6

Charging voltage

Model>	24V	48V
$U_{ds}[V]$	22,8	45,6
$U_1[V]$	28,8	57,6
$U_2[V]$	28,8	57,6
$U_3[V]$	27	54

Charging time limit

$T_1[h]$	$T_2+T_3[h]$	$T_1+T_2+T_3[h]$
3h	8h	12h

The charging time limit  $T_4$  changes with the  $T_2+T_3$  ,

$T_2+T_3[h]$	$\leq 4$	5	6	7	8
$T_4[h]$	2	2,5	3	3,5	4

### 3.4 Online program update

Step 1, Hardware connection

Step 2, Turn on the AC power,  
 Step 3, Open PCAN\_reprogram tool.exe

PCAN\_reprogram tool.exe

Step 4, Select PCAN\_USB for hardware connection

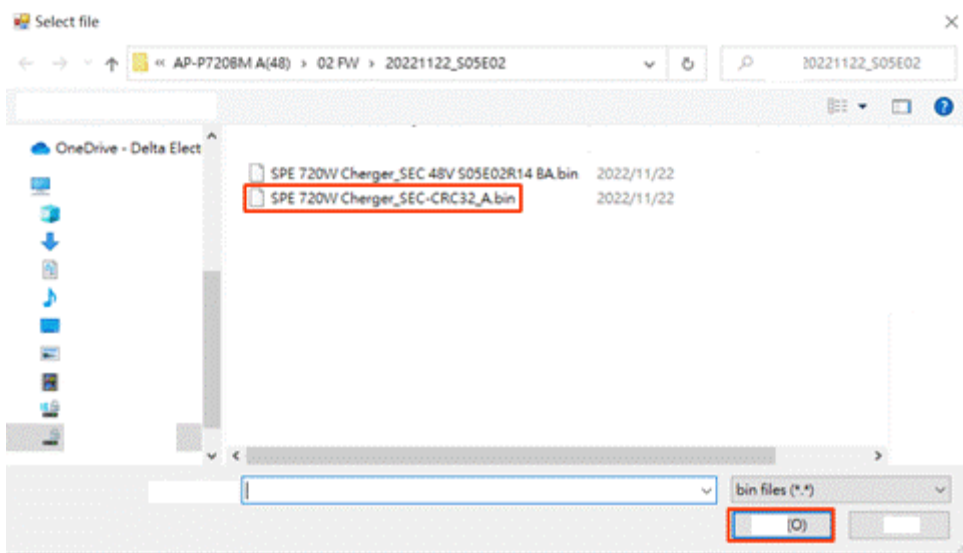

Step 5. Initialize.

Step 6, Import bin file,

Step 7, Select the bin file to be updated,

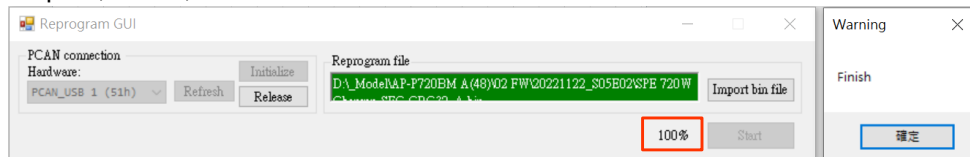

Step 8, Start

Step 9, Wait 3 to 5 minutes,

Step 10, Finish,

Step 11, Release,

Step 12, Turn off the AC power

Step 13, Disconnect PCAN-USB

Step 14, Turn on the AC power again to charge,
