

Curtis 1268 Turf Switch EKP Installation Instructions

1 OF 1

Date: 9/14/15

Revision: 01

Before you start...turn Tow/Run switch to Tow and disconnect the battery cables.

Parts List

Part Number	Desc	QTY
76-1268-TRUFEKP	Turf Switch Assembly	1

NOTE: The following instructions assume the corresponding 1268 conversion kit from FSIP has been installed on the vehicle.

The 1268 uses pin 20 to change the performance settings of the vehicle. When this pin is at 0V the control will operate in mode 1. When pin 20 is held at B+ the control will operate in mode 2. Keep this in mind when programming each mode on the controller as if this wire is damaged or cut the controller will default to mode 1.

Installation: EZGO PDS

1. Mount the turf switch on the plate with the tow/run switch using the provided hardware.
2. Plug the connector from the turf switch into the conversion harness at the 5P connector. (If the performance plug is inserted it must be removed)
3. Reconnect the battery cables.
4. The 1268's modes can be programmed using a Curtis 1311 or 1313 OEM level handset.
 - a. Settings available to mode change include: top speed, braking and acceleration, minimum field current, and drive current limit.
